

Lab3

1- Launch a jump host

Take a screenshot while you are ssh to the jumphost

Also When you ssh from bastion to the private machine

Screenshot from the console showing the instances ips

2-

Implement the below diagram then take a screenshot while you put dns of the load balancer into the browser and it returns a response from the 2 apache instances

Also Screenshot from the console showing the machines BE WS have private Ips

And finally a screenshot showing the targets of the 2 loadbalancers target groups are healthy
